PROFILE

Senior Frontend Engineer with seven years building production web applications across fintech, games, and e-commerce. Deep React, TypeScript, and Next.js expertise; comfortable across the full stack with Node.js and AWS. Strong opinions on performance (Core Web Vitals as P75 metric), accessibility (in CI, not as afterthought), and developer experience. Currently at Shopify on the merchant-facing platform team. Open to interesting frontend roles, especially anything involving performance, design systems, or WebGL.

CORE SKILLS

FRONTEND	React 18+, TypeScript, Next.js (App Router), Vue 3, HTML5, CSS3, Tailwind, Three.js / WebGL, GLSL
BACKEND	Node.js, NestJS, GraphQL, REST APIs, PostgreSQL, Redis, Server-Sent Events
CLOUD / INFRA	AWS (Lambda, S3, CloudFront, EKS), Docker, GitHub Actions, CI/CD pipelines
TOOLING	Vite, Webpack, Vitest, Jest, Playwright, Storybook, Sentry, ts-morph
PRACTICES	Performance optimization, Web Accessibility (WCAG AA+), TDD, Code Review, Technical Mentorship, Agile

EXPERIENCE

Senior Frontend Engineer Aug 2024 — Present
Shopify · Remote (Singapore)

Merchant-facing platform team. Build the dashboards and tooling used daily by millions of merchants.

- Drove a refactor of the merchant settings UI that cut Time-to-Interactive on the slowest route by 38% (P75)
- Owned the rollout of a new internal design system primitive — adoption telemetry across 12 product teams
- Wrote internal tooling for type-safe feature flags, replacing a string-based system that had caused 3 production incidents in 2024
- On-call rotation for frontend platform incidents — authored 4 post-mortems, contributed to 2 RFCs
- Stack: React 18, TypeScript, Next.js, Remix, GraphQL, Node.js

Frontend Tech Lead Mar 2022 — Jul 2024
Aurora Games · Singapore (Hybrid)

Led frontend for the player-facing web platform — leaderboards, profiles, interactive game previews.

- Cut load times by 70% and improved Core Web Vitals scores by 45% through caching, code-splitting, and bundle optimization
- Built immersive WebGL/Three.js experiences — launch trailer page achieved 35% increase in session length
- Led migration to React 18 and Redux-Saga across the platform; zero downtime, 30% fewer re-renders
- Deployed multi-layered security (CSP, CSRF, encryption-at-rest); eliminated 95% of internal audit findings
- Mentored team of six engineers to 100% on-time milestone delivery; introduced async-first standups
- Built CI-integrated visual regression testing using Playwright; caught ~12 visual bugs/quarter pre-merge

Senior Software Engineer Sep 2020 — Feb 2022
Lumina Pay · Singapore

Cross-border payments product (Series B fintech). Started full-stack, transitioned to frontend specialist.

- Led rebuild of the payments dashboard from a legacy Backbone + jQuery stack to React + TypeScript
- Designed and shipped the merchant onboarding flow — reduced drop-off by 22%
- Built a real-time transaction feed using Server-Sent Events; reduced support agent perceived latency from ~6s polling to sub-second
- Owned integration with three payment gateways (Stripe, internal banking partner, regional alternative)

Tessellate Studio · Singapore

Small product agency. First role out of NUS. React, Vue, and Node.js depending on the client.

- Shipped 4 client projects from kickoff to launch — Vue 2 SPAs to Next.js marketing sites
- Standardized the studio's frontend project template; reduced new-project bootstrap from ~3 days to under a day
- Implemented adaptive responsive design patterns; client retention rate improved 18%

OPEN-SOURCE PROJECTS

shader-garden — A small Three.js + GLSL playground with hot-reload that preserves uniform state. ~12 shaders, declarative uniform protocol via JSON sidecars. github.com/remalw/shader-garden · MIT

next-typed-routes — Type-safe routing helpers for Next.js App Router using TypeScript template literal types. Compile-time-checked links and route params. github.com/remalw/next-typed-routes · MIT

react-overlay-stack — Headless modal/drawer/popover stack manager with proper ESC handling, focus traps, and scroll lock. github.com/remalw/react-overlay-stack · MIT

webgl-perf-budget — Lightweight runtime perf budget for WebGL scenes. Subscriber API for production monitoring. github.com/remalw/webgl-perf-budget · MIT

ts-strict-codemod — Five focused codemods (built on ts-morph) to ease incremental migration to TypeScript strict mode. github.com/remalw/ts-strict-codemod · MIT

EDUCATION

National University of Singapore (NUS)

2015 — 2019

B.Sc. (Hons) Computer Science · First Class Honours · Specialization: Software Systems. Final-year project: real-time collaborative whiteboard using CRDTs and WebRTC.

WRITING

Why TypeScript strict mode should be your default (and how to migrate without tears) — Jan 2026

Three.js performance: how I cut WebGL frame time by 40% — Sep 2025

How we migrated to React 18 in production: lessons from a 6-month rollout — Apr 2025
